Abstract. Totally 11 species of family *Mymaridae* collected with Malaise trap from 6.06.to 10.08. 2000, are firstly recordet to the fauna of Crete.

Key words. *Mymaridae*, *Gonatocerus*, *Anaphes*, *Anagrus*, *Stephanodes*, *Polynema*, *Mymar*, Crete.

Acknolegements. I deeply thank my colleague Dr. St. Petrov of Agrarian University, Plovdiv for loan of the specimens collected by him in Crete.

INTRODUCTION

The fauna of *Mymaridae* of Crete has not been investigated at all. (Aeschliman, 1977; Donev, 1985,1988). So the present work begins a study of this family in the island.

Мимаридната фауна на остров Крит не е била обект на специални проучвания. При обработката на събраните през VI-VIII 2000 г. материали от района на гр. Ираклио бяха установени 6 рода и 11 вида. Род *Gonatocerus*- 3 вида; Род *Anaphes*- 1 вид; Род *Anagrus* – 1 вид; Род *Stephanodes* – 1 вид; Род *Polynema*- 3 вида; Род *Mymar* – 2 вида.
