ABSTRACT. A check-list of 109 Dolichopodidae species (with faunistic data) is given. The genera *Ortochile* and *Chrysotimus*, and the species *Ortochile unicolor*, *Chrysotimus molliculus*, *Hercostomus longiventris*, *Hercostomus nanus* and *Poecilobotrus comitialis* are newly recorded to the fauna of Bulgaria. New localities of 30 species are given herein too.

KEY WORDS. Diptera, Brachycera, Dolichopodidae, Check-list, Bulgaria.

INTRODUCTION

First data about the family in Bulgaria are given by NEDELKOV (1909, 1912), who reported 12 species. Then PARENT (1938) added six species and CASPERS (1951) - one species. BESHOVSKI (1964, 1967, 1971, 1972a,b, 1973) announced 62 species from the Bulgarian Black Sea area and in 1966 he described a new species – *Epithalassius stackelbergi*. Other 7 species was published by NEGROBOV (1991), and POLLET (1996) announced the species *Achalcus flavidollis* collected in Bulgaria. OLEJNÍČEK (1999) described a new species from Bulgaria – *Chrysotus polleti*. BESHOVSKI and DZHAMBAZOV (2002) added to the list 9, and KECHEV (in press) - 3 species more.

MATERIAL AND METHODS

The list below contains all the species of Dolichopodidae known in Bulgaria till now. Authors, publishing the species, and localities (see Fig. 1 and 2, and Table 1) are pointed out. (only the species enumerated in the monography of PARENT, 1938 and in the catalogue of NEGROBOV, 1991 are not given faunistic data about). New localities for 30 species are given herein.

The new species to the fauna of Bulgaria are marked with an asterisk, and the new genera - with two asterisks
